Peter Thomas Sandy and Margaret Rioga

**Abstract**

Community mental health nurses are part of community mental health teams that offer care and support to service users with mental distress. They are generally described as "gate keepers" because they ensure service users' timely assessment and access to appropriate therapeutic services. Because service users' needs are unique and constantly changing, community mental health nurses are required to reconceptualise their approaches to care. One approach that has gained popularity in mental health services because it advocates individualised care, collaborative and partnership working is recovery. This chapter uses a recovery framework to discuss the roles of community mental health nurses from a contextual and practical perspective. It uses a case study of a service user with mental distress to illustrate this. To increase understanding of the service user's recovery journey, key principles of a recovery approach to community mental health nursing are included in the chapter.
