Soil Chemistry Processes And Constituents:

Soil Chemistry György Filep, 1999 **The Chemistry Of Soil Constituents** D.J.Greenland, M.H.B.Hayes, 2016-07-21

Since the beginning of this century production of chemical fertilizers has increased many fold and the production of pesticides for addition to the soil has become a new major industry These are not the only chemicals added to the soil because by accident or design many other chemicals which enter the environment end up in the soil The soil has to produce the bulk of the food and fiber to sustain this growing population In this volume a short historical outline of the development of soil science is given touching briefly on soil formation soil physics and soil biology as it can be misleading to regard soils simply as chemical entities It is also important to have some appreciation of the several processes which have produced the particular soil found at any one place The major soil types of the world differ according to their origin Several systems exist for classifying them and different names are in use for the same major soil types The most common names of these are therefore introduced The following two chapters deal with the inorganic and organic components of soils respectively The chemical structures of the major inorganic components are now reasonably well known but this is not true of the organic or humic materials in soils The relevant chapter presents an account of what has been experimentally established regarding the constitution of the peculiarly intractable complex of organic compounds found in soils Chemical processes in soils are largely determined by reactions at the surfaces of the soil colloids The final three chapters are therefore concerned with the nature and extent of the surfaces of soil colloids their electrical characteristics and the ways in which ions and water are held and arranged at the surfaces **Transformation Processes of Metals in Urban Road Dust** Ayomi Jayarathne, Buddh

Wijesiri, Prasanna Egodawatta, Godwin A Ayoko, Ashantha Goonetilleke, 2019-12-07 This book discusses the physicochemical changes transformations that metals deposited on urban road surfaces undergo during dry weather periods in order to provide insights into their potential impacts on stormwater quality Based on extensive field experiments and laboratory and data analyses it examines transformation characteristics of metals with respect to the particle size of road dust antecedent dry days and land uses Further it proposes a new risk assessment methodology improving the original human health risk indices based on the transformation characteristics and potential bioavailability of metals in order to evaluate the risks posed by metals in stormwater This book is of interest to researchers and decision makers developing appropriate pollution mitigation measures to enhance the quality of stormwater targeting the effective reuse of stormwater in urban areas
