Tomorrows World Britains Share In A Sustainable Future:

Tomorrow's World Duncan McLaren, Dr Duncan Bullock McLaren (Simon Yousuf, Nusrat), Simon Bullock, Nusrat Yousuf, 2013-11-05 This title uses the concept of environmental space to resolve many of the issues facing us in the future and applies the lessons specifically to the UK. Believing that we occupy more environmental space than the world can afford, this book seeks to explain what we can do to live comfortably within what we actually have through efficiency and sufficiency. In addition, it aims to present the sustainable levels of consumption for Britain as targets for government, industry and households, as well as an idea of how to achieve them. Tomorrow's Politics Ian Christie, Ian Hargreaves, 1998

Negotiating Environmental Change F. Berkhout, 2003-01-01 The ESRC GEC programme has made a major contribution in terms of environmental social science research. The chapters in this book provide incisive, detailed and reflective critiques of the development of knowledge over the last ten years and provide powerful and important messages about the challenges presented by the complex relationship between environmental and social change. The book should be essential reading for all researchers and also for all policymakers who are grappling with questions about how to respond to environmental society controversies. Judith Petts, Birmingham University, UK and Member of the Royal Commission on Environmental Pollution. Global environmental change will be with us forever. But how it happens in the future and with what effect on the planet and its peoples depends to a large extent on how the international agreements, national politics and local actions play out. This collection provides the most comprehensive assessment yet of these critical interconnections and reveals how social scientists are making an invaluable contribution to the creation of more science and just livelihoods in a future world. Tim O'Riordan, University of East Anglia, UK. An aphrodisiac to the tepid response of positivist social science. People are not merely actors, perpetrators and victims in an environmental drama. The critical social theorists in this book constructively show us how people are improvising the stage and the script as we update our understanding of nature, what constitutes a good life and our individual and collective options. Richard B. Norgaard, University of California, Berkeley, US. Negotiating Environmental Change is a child of the ESRCs Global Environmental Change Programme, by far the biggest piece of work by social scientists in the United Kingdom during the 1990s. At the beginning of the twenty-first century, the balance sheet needs to be drawn up: what do our policies, insights and values owe to the collaborative efforts of social scientists? This book suggests that ideas and approaches that were conceived at a time when the Ozone Hole, Global Warming and Biodiversity Losses were beginning to resonate in academic and policy circles have now entered the British and European psyche. The challenge of forward thinking in the twenty-first century, in which the environment is central to most of the issues that concern social science, is to demonstrate that the environment is not a separate territory. Environmental thinking and practice affects us in various guises: governance and democracy, business and management, risk and everyday consumption. The substance of this book, Negotiating Environmental Change, makes clear the contribution that new thinking is making to

problems that were not looked upon as environmental a decade ago but which we now see as being at the forefront of global research and policy agendas Michael Redclift King's College London UK Major advances have been made recently in environmental social science but the context and importance of this research has also changed Social and natural science studies of the environment have begun to interact more closely with each other and many analysts now agree that an understanding of environmental problems often depends on an understanding of the attitudes and behaviour of people and organisations Moreover policy and public debates have also shown that many assumptions that underpin arguments about sustainable development need to be reconsidered and re framed This book by leading researchers presents a critical review of debates in environmental social science over the past decade Three broad areas are covered in ten chapters the problems of scientific uncertainty and its role in shaping environmental policy and decisions the development of institutional frameworks for governing natural resources and the link between economic and technological change and the environment The book begins with an overview essay exam

Environmental History of Great Britain Ian G Simmons, 2019-08-07

This is a history of the environment of England Wales and Scotland and of the interactions of people place and nature since the last ice sheet withdrew some ten thousand years ago It is concerned with the changing cultures in the full anthropological sense of the peoples inhabiting Britain as well as with the environment they transformed exploited abused and cherished As the author points out every culture in Britain has had to acknowledge its placement on a set of islands 50 N where any month of the year can be the wettest month of the year where there are some long shallow estuaries and a few deep inlets and where cereals do not reliably ripen 300 metres above sea level Cultural imagination cannot alter these realities but it can variously view them as dangerous or picturesque as economic or uneconomic The book is a history of changing reflexivity in the interactions between people culture and nature The book is structured as a chronological narrative It is written with unusual grace wit and clarity and illustrated with 50 photographs and some 60 maps and diagrams all specially prepared for this book The author draws on a very wide range of sources and uses scientific evidence as well as the conventional historical record as well as on his own experience of the landscapes of Britain This is cultural and natural history at its best with a wide appeal within and without the academy

Environment & Planning ,2006 **The British National Bibliography** Arthur James Wells, 2009 *Regulating Pollution* Chris Hilson, 2000-07-10 This book aims to provide a comprehensive picture of UK and EC pollution regulation. Although written by a lawyer it adopts an interdisciplinary approach to regulation which seeks to move beyond the sociological and economic frameworks within which pollution regulation has typically been analysed in the UK. The UK and EC regulatory systems are examined within the context of regulatory federalism. The aim of this is to explore how and why regulatory decisions concerning pollution are taken at different levels of a federal regulatory hierarchy. The book begins with a discussion of the essentials of pollution regulation including traditional economic justifications for regulation and non-economic ones based on environmental ethics. It goes on to examine subsidiarity and the appropriate level for regulation, a particularly topical issue in the light of recent devolution within the UK. Models of regulatory decision making are then addressed, comparing the rigours of ecologism with the cost-benefit based alternative of economism and the more participatory style of republicanism. Other chapters include a comparison of the various regulatory techniques in terms of the values of accountability, equality, certainty, efficiency and effectiveness and an examination of regulatory enforcement covering issues such as accountability for enforcement decisions, corporate liability, strict liability and a critical analysis of the so-called co-operative approach.
