Tools And Modes Of Representation In The Laboratory Sciences:

Tools and Modes of Representation in the Laboratory Sciences U. Klein, 2001-10-31 Fourteen chapters provide insights into the efforts of 19th and 20th century scientists to construct working representations of invisible objects such as the structural formula of a dye a three dimensional model of a protein or a table conveying relationships between chemical elements The essays focus on scientists pragmatic use of representation exploring the concrete ways that scientists implement sign systems as productive tools both to achieve and to shape their organizational goals Editor Klein is associated with the Max Planck Institute for the History of Science Berlin Annotation copyrighted by Book News Inc Portland OR

Tools and Modes of Representation in the Laboratory Sciences U. Klein, 2013-04-17 constitutive of reference in laboratory sciences as cultural sign systems and their manipulation and superposition collectively shared classifications and associated conceptual frameworks and various forms of collective action and social institutions This raises the question of how much modes of representation and specific types of sign systems mobilized to construct them contribute to reference Semioticians have argued that sign systems are not merely passive media for expressing preconceived ideas but actively contribute to meaning Sign systems are culturally loaded with meaning stemming from previous practical applications and social traditions of applications In new local contexts of application they not only transfer stabilized meaning but also can be used as active resources to add new significance and modify previous meaning This view is supported by several analyses presented in this volume Sign systems can be implemented like tools that are manipulated and superposed with other types of signs to forge new representations The mode of representation made possible by applying and manipulating specific types of representational tools such as diagrammatic rather than mathematical representations or Berzelian formulas rather than verbal language contributes to meaning and forges fine grained differentiations between scientists concepts Taken together the essays contained in this volume give us a multifaceted picture of the broad variety of modes of representation in nineteenth century and twentieth century laboratory sciences of the way scientists juxtaposed and integrated various representations and of their pragmatic use as tools in scientific and industrial practice Tools and Modes of

Mathematical Reasoning and Heuristics Carlo Cellucci, Donald Gillies, 2005 This volume is a collection of papers on philosophy of mathematics which deal with a series of questions quite different from those which occupied the minds of the proponents of the three classic schools logicism formalism and intuitionism The questions of the volume are not to do with justification in the traditional sense but with a variety of other topics Some are concerned with discovery and the growth of mathematics How does the semantics of mathematics change as the subject develops What heuristics are involved in mathematical discovery and do such heuristics constitute a logic of mathematical discovery What new problems have been introduced by the development of mathematics since the 1930s Other questions are concerned with the applications of mathematics both to physics and to the new field of computer science Then there is the new question of whether the axiomatic method is really so essential to mathematics as is often supposed and the question which goes back to Wittgenstein of the sense in which mathematical proofs are compelling Taking these questions together they give part of an emerging agenda which is likely to carry philosophy of mathematics forward into the twenty first century

Logic and Knowledge Carlo Cellucci, Emily Grosholz, Emiliano Ippoliti, 2011 The problematic relation between logic and knowledge has given rise to some of the most important works in the history of philosophy from Books VI VII of Plato TM s Republic and Aristotle TM s Prior and Posterior Analytics to Kant TM s Critique of Pure Reason and Mill TM s A System of Logic Ratiocinative and Inductive It provides the title of an important collection of papers by Bertrand Russell Logic and Knowledge Essays 1901 1950 However it has remained an underdeveloped theme in the last century because logic has been treated as separate from knowledge This book does not hope to make up for a century long absence of discussion Rather its ambition is to call attention to the theme and stimulating renewed reflection upon it The book collects essays of leading figures in the field and it addresses the theme as a topic of current debate or as a historical case study or when appropriate as both Each essay is followed by the comments of a younger discussant in an attempt to transform what might otherwise appear as a monologue into an ongoing dialogue each section begins with an historical essay and ends with an essay by one of the editors

Chemical Explanation Joseph E. Earley, 2003 Over many centuries chemists and their alchemical predecessors evolved a sophisticated array of concepts and methods that yield reliable understanding when applied to systems of complexity intermediate between those generally considered by physicists at one extreme and biologists at the other Chemical problems can be chosen so that quantitative modelling can be used fruitfully while also displaying some of the intriguing features typical of more complex cases Papers in this volume address relations between macroscopic and microscopic description essential roles of visualization and representation in chemical understanding historical questions involving chemical concepts impacts of chemical ideas on wider cultural concerns and relationships between contemporary

chemistry and other sciences The authors demonstrate assert or tacitly assume that chemical explanation is functionally autonomous This volume should be of interest not only to professional chemists and philosophers but also to workers in medicine psychology and other fields in which relationships between explanations based on diverse levels of description and investigation are important
