Rust,Ming-Hui Huang,2021-01-19 As machines are trained to think many tasks that previously required human intelligence are becoming automated through artificial intelligence However it is more difficult to automate emotional intelligence and this is where the human worker s competitive advantage over machines currently lies This book explores the impact of AI on everyday life looking into workers adaptation to these changes the ways in which managers can change the nature of jobs in light of AI developments and the potential for humans and AI to continue working together The book argues that AI is rapidly assuming a larger share of thinking tasks leaving human intelligence to focus on feeling The result is the Feeling Economy in which both employees and consumers emphasize feeling to an unprecedented extent with thinking tasks largely delegated to AI The book shows both theoretical and empirical evidence that this shift is well underway Further it explores the effect of the Feeling Economy on our everyday lives in the areas such as shopping politics and education Specifically it argues that in this new economy through empathy and people skills women may gain an unprecedented degree of power and influence This book will appeal to readers across disciplines interested in understanding the impact of AI on business and our daily lives It represents a bold potentially controversial attempt to gauge the direction in which society is heading **The De Gruyter**

Handbook of Automated Futures Vaike Fors,Martin Berg,Meike Brodersen,2024-09-23 How does automation affect us our environment and our imaginations What actions should we take in response to automation Beyond grand narratives and technology driven visions of the future what more can automation offer With these questions in mind **The De Gruyter**

Handbook of Automated Futures provides a framework for thinking about and implementing automation differently It consolidates automated futures as an inter and transdisciplinary research field embedding the imaginaries interactions and impacts of automation technology within their social historical societal cultural and political contexts Promoting a critical yet constructive and engaging agenda the handbook invites readers to collaborate with rather than resist automation agendas It does so by pushing the agenda for social science humanities and design beyond merely assessing and evaluating existing technologies Instead the handbook demonstrates how the humanities and social sciences are essential to the design and governance of sustainable sociotechnical systems Methodologically the handbook is underpinned by a pedagogical approach to staging co learning and co creation of automated futures with rather than simply for people In this way the handbook encourages readers to explore new and alternative modes of research fostering a deeper engagement with the evolving landscape of automation
