**An Insight into China-US Competition in the Field of Artificial Intelligence** Sana Gul, 2022-01-10 Examination Thesis from the year 2021 in the subject Computer Sciences Artificial Intelligence grade 3.77 University of Peshawar course BS International Relations language English abstract Artificial intelligence has recently emerged as a new subject of international competitiveness. In the realm of artificial intelligence, both the United States and China are world leaders. The struggle between both countries in AI will heighten mutual mistrust, accelerate the artificial intelligence arms race, and endanger geopolitical stability. This research looks at how both nations are progressing in many sectors of artificial intelligence and how Beijing is challenging America. However, there remains a gap between them in terms of artificial intelligence advancement. In the race for artificial intelligence supremacy, the United States is losing ground to China because of no long-term strategy. The study examines the prospect that artificial intelligence might have an impact on the two nations' national security as well as substantial alterations in the future power structures of the US and China. Still, China may become an emerging global power, and it is using artificial intelligence to elevate its position by sidelining the United States.

**Artificial Intelligence** Rainer Born, 1989 Computers and Artificial Intelligence, 1996 *The Independent*, 1910 The Dynamic Structure of Everyday Life Philip Agre, Massachusetts Institute of Technology. Artificial Intelligence Laboratory, 1988 A running argument means continually redeciding what to do. Continually redeciding what to do is more flexible than executing a plan because it is more responsive to opportunities and contingencies. It is possible to approximate the ideal of continual redecision because life is wholly a routine. The routine portion of the reasoning leading to each moment's action can be implemented very efficiently by recording the reasons behind any novel bits of reasoning, a method known as dependency maintenance. A computer program called the running argument illustrates this point.
